

# HABITAT HUNT

## Become an animal detective!

Go investigating and think about all of the creatures living around you. Where are their homes? What kind of environment do they live in? What clues can you find that tell you which animals are around? How many different animal homes can you spot? Remember to respect the animals and to try not to touch their homes. Take a photo and leave the creatures and their habitats undisturbed. You can play this like BINGO and see who can get a line first. Then see if you can cross off everything on the grid!

Spot a bird's nest	Find a hole in the ground made by an animal	Find lots of creatures living together eg ant nest	Spot a spider's web and a spider's nest
Spot something living in/on the trunk of a tree	Spot a mammal	Spot animal scratches or animal footprints	Spot a bug on, or inside, a flower
Find eggs, pupae, or larvae	Find something that has been nibbled	Spot something living in water	Find a feather, shell, or droppings left by an animal
Find something living under a rock	Find something living in leaf litter	Find something living in the soil	Find something living in rotten wood
